Development

PROBLEM

Delayed Trash Bags Collection:

- Forgotten trash

Continuous Residential Complaints:

- Smell
- Blocking Path

Lack of Real-Time Monitoring

Development

SOLUTION

AI Based Classification System:

6 waste categories:

- pay-as-you-go bag
- recyclable
- gunny sack
- big waste
- food waste
- non-compliant

Data Export to csv

Web & Mobile Application

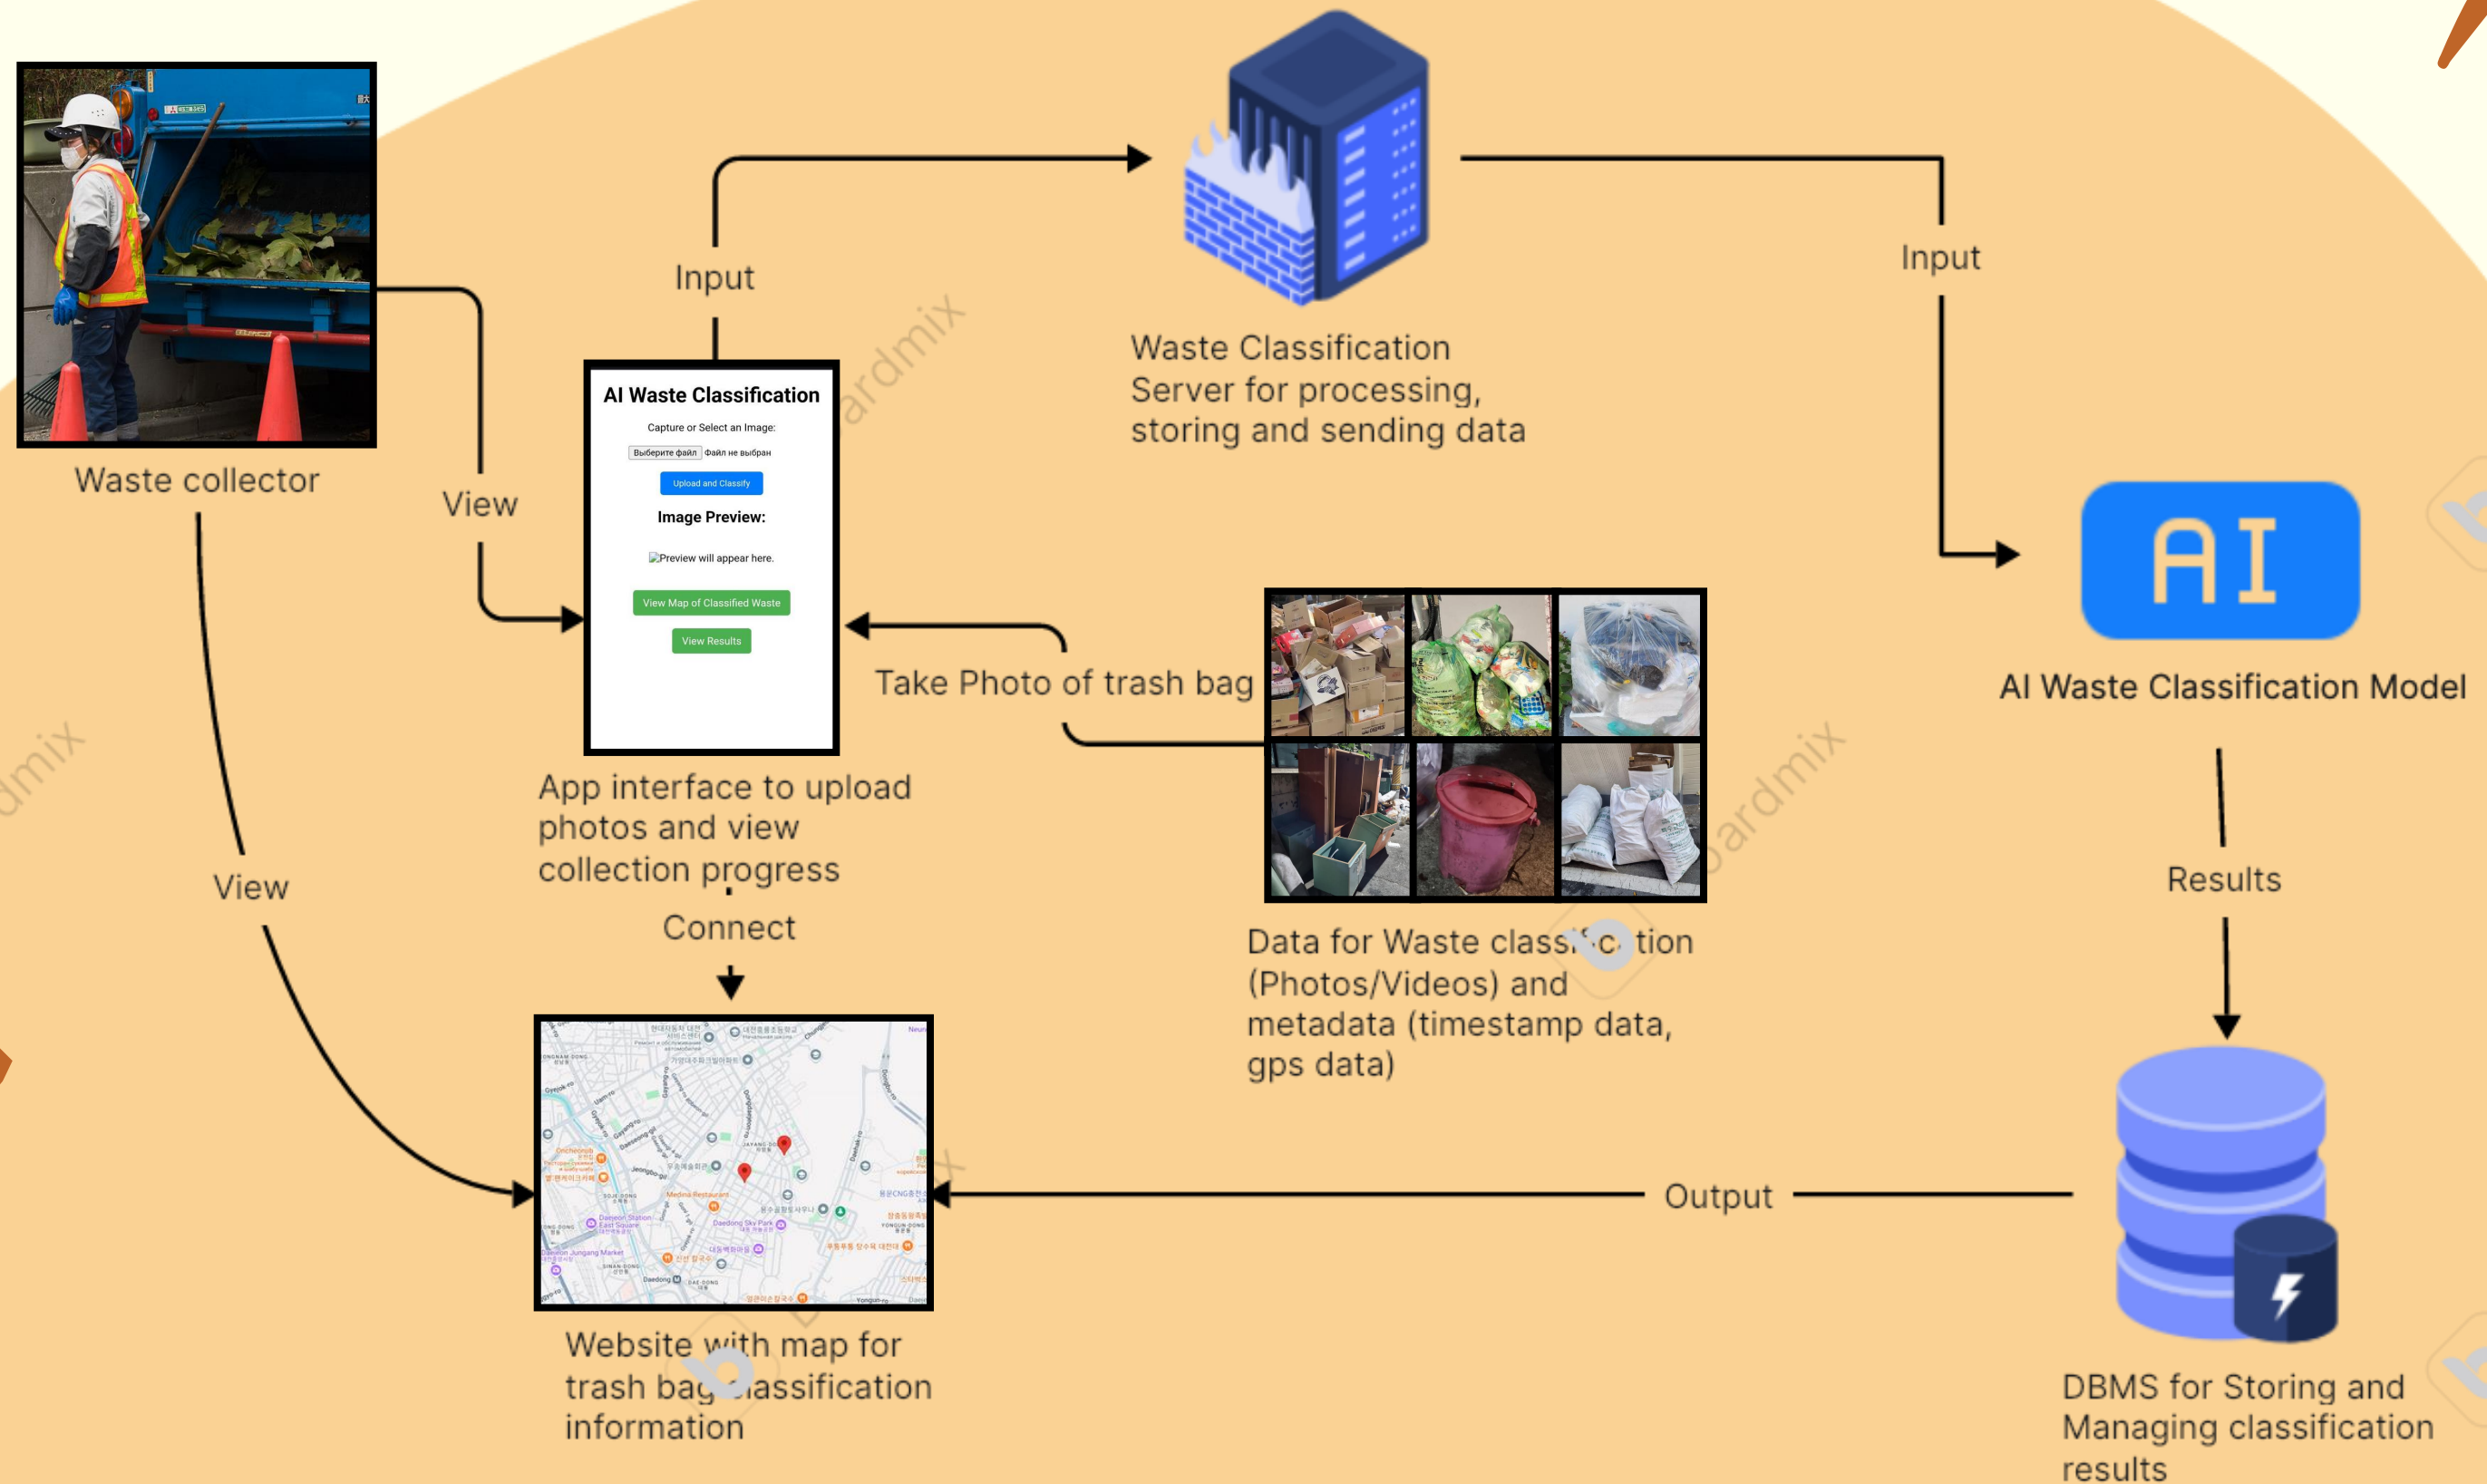

Integrated Map for Real-Time Monitoring

The image shows two screenshots of the AI Waste Classification application. The left screenshot is a desktop view of the web application. It features a header 'AI Waste Classification' and a section 'Capture or Select an Image:' with a file selection button (labeled 'Выберите файл' and 'Файл не выбран') and an 'Upload and Classify' button. Below this is an 'Image Preview:' section with a placeholder 'Preview will appear here.' and buttons for 'View Map of Classified Waste' and 'View Results'. The right screenshot is a mobile application view. It shows a camera capture of a trash pile on a sidewalk. Below the image is the 'Classification Results:' section, which displays a JSON object:

```
{  "counts": {    "BigWaste": 0,    "FoodWaste": 0,    "General": 3,    "GunnyBags": 0,    "Non-Compliant": 4,    "Recyclable": 3  },  "gps": {    "latitude": 36.337550999722225,    "longitude": 127.45166989972222  }}
```

 Below the JSON is a 'View Map of Classified Waste' button and a 'View Results' button. At the bottom of the mobile screen, there is an 'Export to CSV' button. An arrow points from the 'Data Export to csv' text in the yellow box to the 'Export to CSV' button in the mobile screenshot.

SYSTEM

DEVELOPMENT #1

Dataset Collection and Preprocessing

Roboflow

Dataset 8000 images:
Training 92%
Validation 6%
Test 2%

4 Augmentation

What can augmentation do?
Create new training examples for your model to learn from by generating augmented versions of each image in your training set.

Flip Horizontal, Vertical	Edit	×
90° Rotate Clockwise, Counter-Clockwise, Upside Down	Edit	×
Rotation Between -15° and +15°	Edit	×
Shear ±10° Horizontal, ±10° Vertical	Edit	×
Brightness Between -15% and +15%	Edit	×

+ Add Augmentation Step

Use Previous Augmentations
Use augmentations from a previous version.

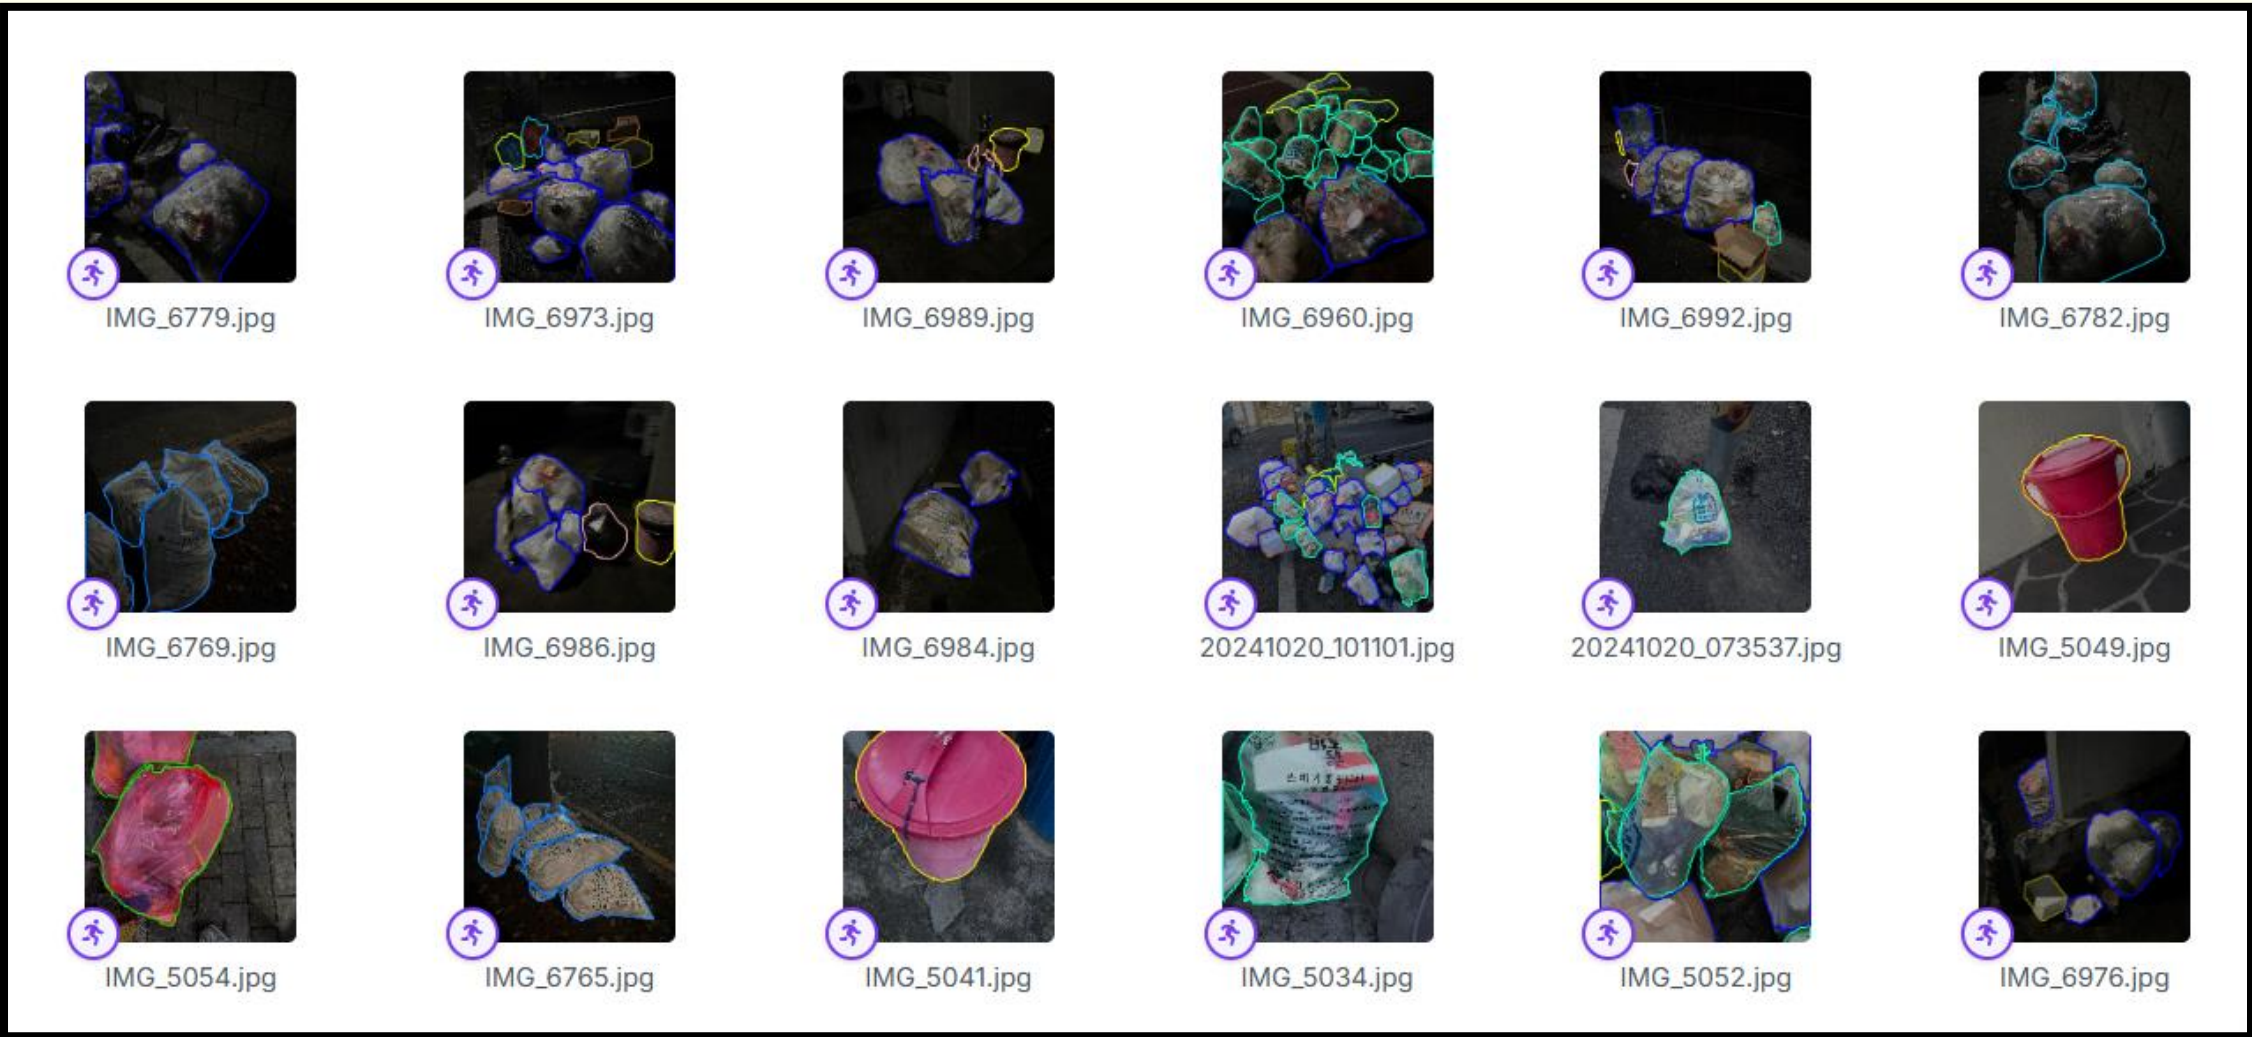

Continue Clear All

DEVELOPMENT #1

Labeling

Roboflow Labels:

	big-waste
	food-waste
	general-blue
	general-green
	gunny-bag
	gunny-bag-orange
	recyclable-bag-white
	recyclable-cardbox
	recyclable-icebox

DEVELOPMENT#1

AI model training

Accuracy 85%

YOLO model:

YOLOv9c

YOLOv5

YOLOv11

IDE for training:

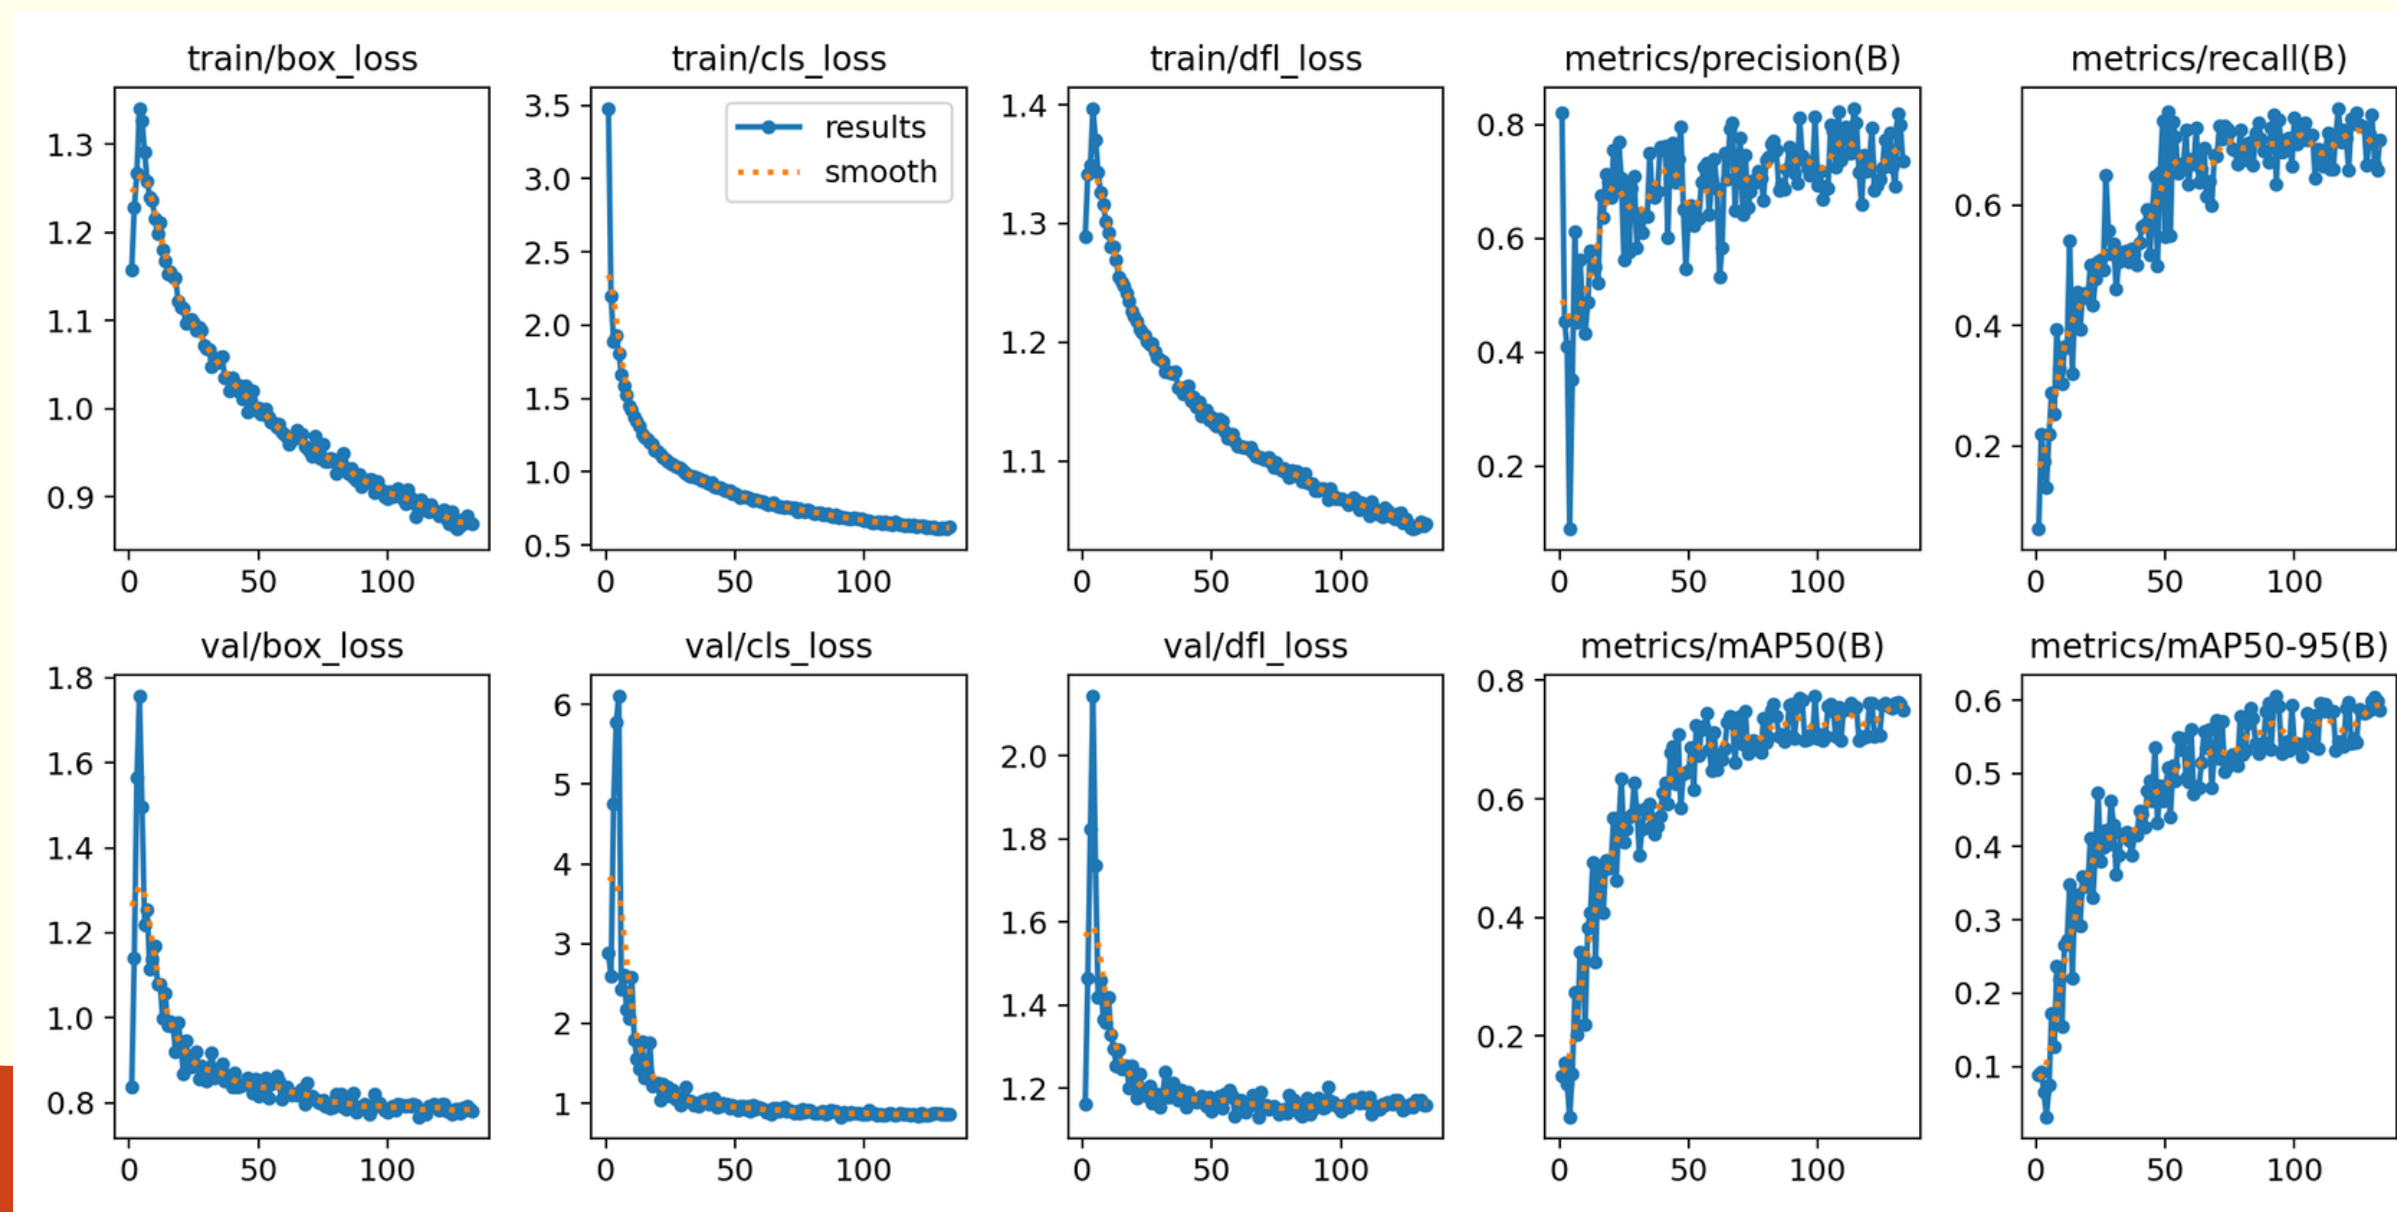

Google Colab

Kaggle

DEVELOPMENT #1

AI model training

RESULTS

Fully Functional AI System:

- Fast Trash Bag Classification.
- Accurate Object Detection.

Integrated Web Map.

- Fast Response.
- Comfortable Monitoring.

Web and Mobile Application:

- Efficiency Improvement.
- Data Result Export

FUTURE PLAN

2025 -2026

- Improve AI Model.
- Expand System Features.(route estimation)
- Real World Testing.
