3. It will save your time because you will be able to find your price with in a few clicks.
4. You will have lots of options to select.
5. Less price, more convenient.
6. Easiest layout

Expected Effects

- A bus ticket application can have several expected effects, including:
- Convenience: A bus ticket application can make it even more convenient for customers to purchase tickets on-the-go without having to physically go to a ticket office or wait in long lines.
- Real-time information: A bus ticket application can provide real-time information about bus schedules, delays, and cancellations, allowing customers to plan their travel more effectively.
- Location-based services: A bus ticket application can use location-based services to help customers find nearby bus stops, track their bus in real-time, and receive alerts when their bus is approaching their stop.
- Seamless payment: A bus ticket application can enable seamless payment methods, such as mobile wallets, allowing customers to quickly and easily purchase tickets without having to input payment details each time.
- Personalization: A bus ticket application can provide personalized recommendations and offers to customers based on their travel history and preferences.
- Improved customer engagement: A bus ticket application can improve customer engagement by providing customers with a direct communication channel with the bus company, enabling them to provide feedback and receive support more easily.
- Overall, a bus ticket application can provide a range of benefits for both customers and bus companies, including increased convenience, real-time information, location-based services, seamless payment, personalization, and improved customer engagement. By leveraging technology, bus companies can improve the customer experience and increase customer loyalty.

Intercity Bus Service - Redefining Bus Travel in Korea

Intercity Bus Service is a pioneering platform developed by Team Noobrammers, led by Kakon Chakrabarty Shawon and managed by Tanvir Ahamed. Our talented developers, including Cinmoy Purkaystha and Zawad Al Sazid, have worked tirelessly to create a convenient, sustainable, and affordable solution for intercity bus travel in Korea.

As Korea's first English-language bus ticket website, we offer a user-friendly interface that makes booking a breeze. Our platform ensures faster service and guarantees a hassle-free experience for both locals and international visitors.

Join us on this journey as we strive to make bus travel accessible to all, while prioritizing sustainability and affordability. Discover the ease and convenience of booking with Intercity Bus Service today.

NEED OF OUR APPLICATION

- There is a need for a bus ticket site in South Korea that is available in English for non-Korean speakers. This is because many foreign tourists visit South Korea each year, and they often rely on public transportation, including buses, to get around the country.
-
- Having a bus ticket site available in English would make it easier for these tourists to plan their travels, purchase tickets, and navigate the bus system. It would also help to reduce the language barrier that they may face when trying to communicate with local bus drivers or ticket sellers.
-
- Furthermore, an English-language bus ticket site would also be beneficial for expats and international students living in South Korea who may not speak Korean fluently but still need to use the bus system for daily transportation.
-
- Overall, a bus ticket site in South Korea that is available in English would greatly improve the travel experience for non-Korean speakers and help to promote tourism in the country
